Product Description

Holographic display cabinet is a new technology of three-dimensional imaging suspended in the air, also known as three-dimensional phantom imaging. Holographic technology is used in combination when setting up holographic display cabinets. It displays products in the same space in real time by superimposing real-life modeling and virtual images.

Flexible size, high imaging clarity, the maximum imaging area can be about 4 meters, and the minimum can be 20 to 30 centimeters, which is equivalent to the size of an ordinary mobile phone. It can be selected according to the different needs of customers;

Easy to install, the system cabinet system and structure can be adjusted according to the existing building space structure, which is conducive to permanent preservation and use in various building spaces;

Novel form, compared with traditional 3D display technology, holographic imaging technology does not require wearing polarized glasses, and can display 360° multi-angle viewing angles, which is convenient for viewers to browse;

Diverse content, digital content can be replaced at any time according to requirements, and professional technology is skilled; Cost saving, can control costs to the maximum extent, while ensuring quality and enabling products to be used for a long time.

[Can customize according to different appearance and size, welcome to negotiate!](#)
